

How to Mop the Floor with your Fluid

ITEMS

Tips
For rough floors or floors with grout lines, use the Brush & Mop Frame

Damp Mopping with Cedar Creek Fluid

Mop like a PRO using the Figure 8 method... walking backwards and PULLING the mop across the floor!

1. Start mopping in the far corner of the room, you will want to work your way toward a doorway
2. Hold the Fluid mop so that the tube is FACING YOU (2a), and the green trigger is facing AWAY from you (2b)... this is not a spray mop that squirts the cleaning solution in front of the mop pad, requiring you to walk on your newly cleaned floor, but is a professional mop that dispenses the cleaning solution behind the mop so that you mop walking backwards. If the trigger is facing you (2c) or the tube is facing away from you (2d), you are holding the mop the wrong way.... Turn it around!
3. Press the trigger and hold until a small puddle of cleaning solution is dispensed behind your mop
4. Pull the mop through the cleaning solution with a swirling motion so that all areas of the mop pad are equally moistened
5. Mop moving backwards using a smooth figure 8 motion PULLING the mop across the floor. Use the ball grip of the Fluid handle to easily turn the mop while you walk backwards. The Rocker Frame will be rocked back toward you, making the mop easily glide across the floor. Do not "push & pull" mop like you are swabbing the deck on a pirate ship, this may make the frame flip over
6. As the mop becomes dry, press the trigger to dispense more cleaning solution. Be careful to not dispense so much cleaning solution that you leave the floor too wet and cause streaking
7. If you come to a tough spot on the floor such as a scuff mark or dried food, apply a small amount of cleaning solution on the spot and then PUSH the mop forward in a scrubbing motion which will rock the Rocker frame forward increasing your scrubbing force 65%!
8. When finished cleaning a room, or when a mop pad is loaded with soil, remove and replace with a new mop pad and repeat the process
