

Don't Put Your Students at Risk

Lower the risk of spreading mold, viruses and bacteria with Guardian-X.

All Molds are Hazardous to your Health.

After natural disasters like hurricanes and remediating thousands of commercial buildings and homes, improving indoor air quality (IAQ) is critical to reducing further spread of mold spores. Inhabiting areas while waiting for remediation to be complete can be dangerous without air quality controls in place like Guardian-X.

Molds produce potent toxins or irritants that can lead to:

- Allergic reactions and asthma attacks
- Lung infections for those with compromised immune systems or respiratory illness²

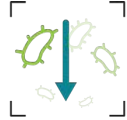

Use an EPA-registered business to ensure your facility is taking proper steps to rid the air of microscopic toxins.³ Guardian-X is registered under EPA establishment No. 092165-MS-001.

Keep your students and staff breathing clean, treated air with Guardian-X.

BENEFITS OF Guardian-X

Reduce the spread of dangerous mold spores, viruses and bacteria with the patented Guardian-X. The fast, continuous UV-C air purification system works 24/7 to improve indoor air quality (IAQ) and provide clean, fresh air to breathe.

REDUCES FUNGI

REDUCES VIRUSES

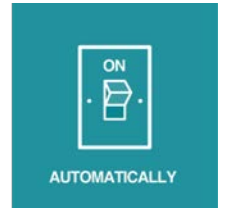

REDUCES BACTERIA

SAVES SPACE

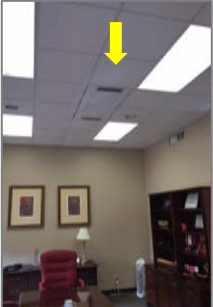

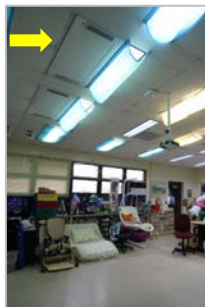

IMPROVES IAQ

Mold Remediation to Blame?

According to an article in NOLA.com/The Times Picayune, a **moldy building may be to blame for the deaths of 4 college professors in New Orleans after the building was flooded during Hurricane Katrina**. Remediation didn't do enough in those tragic circumstances to eliminate dangerous mold spores from the air.

 <p>Houston Case Study GX-03 (no downlights) installed in 2016 in office of University of Houston. Occupant reported 85% reduction in severe allergy symptoms.</p>	 <p>High School Case Study A high school near Jacksonville, Florida has installed four GX-03s in a special needs classroom to help reduce the spread of pathogens for immune-compromised children, many of whom are physically and mentally disabled.</p> 
--	---

Proven Results

- ✓ Peer reviewed published studies
- ✓ Reduces environmental burden
- ✓ Minimizes healthcare odors
- ✓ Lower instances of allergy & asthma symptoms reported
- ✓ Fewer cases of staff absenteeism reported

Available in 2 Options!

How It Works

- Air is drawn into UV-C chamber
- Mold spores are neutralized
- Clean air is then recirculated back into the room

Maintenance is simple

- Annually for UV lamp, as needed for MERV 6 filter

Retrofits easily into standard 2x4 lighting fixtures
