

Your-In Urinal System

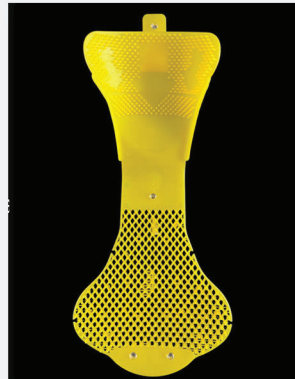

CONSIDER THE BENEFITS OF FAS-TRAK INNOVATIVE SOLUTIONS!

The Your-In Urinal screen system fits almost all urinal shapes and sizes.

The worlds first innovative urinal system that addresses the urine puddle problem's root cause and provides a safer and cleaner sustainable restroom solution.

Installs in seconds! Lasts 50% longer than traditional products.

The only urinal screen design in the world to account for both a forceful stream and non forced drips of urine.

Our patented stay dry clip remains outside the urinal giving a stronger fragrance for up to 30 days! Compared to screens that are being constantly washed out or are permanently submerged that you can't smell.

Improves the overall restroom experience!

Does not float or spin during a flush cycle.

Patented arrow design.

BEFORE

Men don't just pee in a straight line, they also dribble and drip!

INSTALLATION GUIDELINES

1. Ensure the urinal is clean and dry both inside and outside.
2. Align the drip pan section with the front of the urinal with arrows facing towards the drain, the clip will hang onto the front face of the urinal.
3. Make sure there is adequate pitch, the urinal is designed to direct any urine drops into the urinal. More pitch = better drainage.
4. It should not protrude from the urinal edge by more than an 3/4 of an inch, it is designed to go up not out...
5. Once it is centered and has good pitch as it is made from flexible EVA so it will mould into the contours of the urinal when manipulated.
6. Push firmly onto the five suction cups, you want to hear them pop into place, we find starting with either the two on the clip or the one on the funnel section first works best for optimal positioning if there is a dome drain the two front cups may not stick, only three cups will stick down, the Your-In Urinal won't move, don't worry!

FAQ's

- Q. What makes for a safer restroom experience?
A. Less urine is a huge benefit we offer.
- Q. Is there a savings with our system?
A. Yes! Our innovation lasts up to 50% longer than traditional screens. Less mopping and maintenance costs in the bathroom environment.
- Q. What is #1 complaint in facilities?
A. Dirty and under maintained bathrooms.

SPECS AND FEATURES

- 30-day lifecycle – last longer than traditional
- Prevents much less puddling
- Improves restroom experience
- Better restroom reviews
- Less mopping maintenance
- Less slips and safety hazards
- Less foul odors
- Protect flooring
- Made in USA! Patented
